Meydam Lamella Pumps

Meydam MTP35 - Silfas Egersund - Pumping from storage to cooker.

Versions for unloading of fishing vessels and transport of fish and fish waste for industrial use.

Gentle treatment of raw material and high pumping capacity are combined with compact size.

Available with 2 alternative sealing methods. Easily adapted to all pump directions.

The Meydam Lamella Pump is supplied in 4 sizes and with capacities from 5 to 200 m³ / hour.

The key feature is that the Lamella pump is using a minimum of water or admixtures. This results in environmental benefits such as:

- Reduced pollution due to almost 'dry pumping'.
- The pump system is easy to clean, and keep bacteria free.
- The fish and waste are kept in a virtually 'closed system'.

The Meydam pump is constructed of high quality steel (Hardox quality) and long lasting materials and parts. All parts that are subject to wear out, are easily replaceable.

The Pump is very easy to install and incorporate into existing systems.

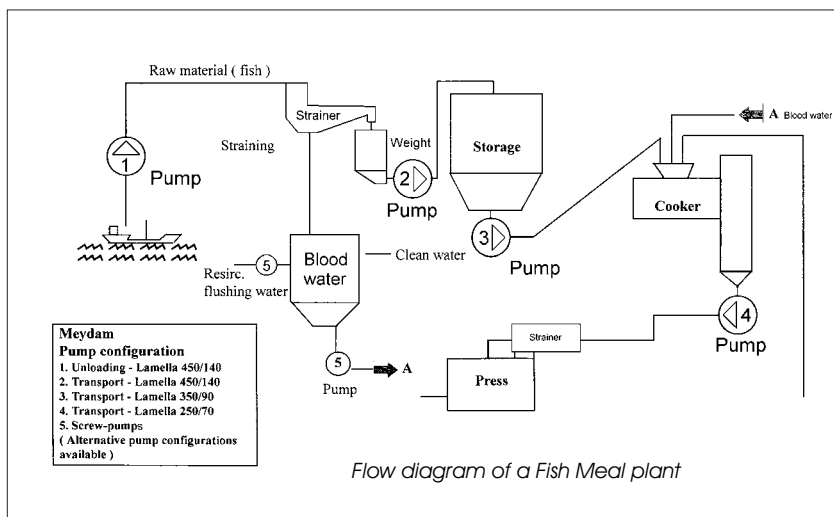

Meydam MTP35 - St. Helena Bay Fishing, S. Africa
