The vacuum system that always does the job.

Meydam delivers vacuum system with single or twin tank for continuous flow.

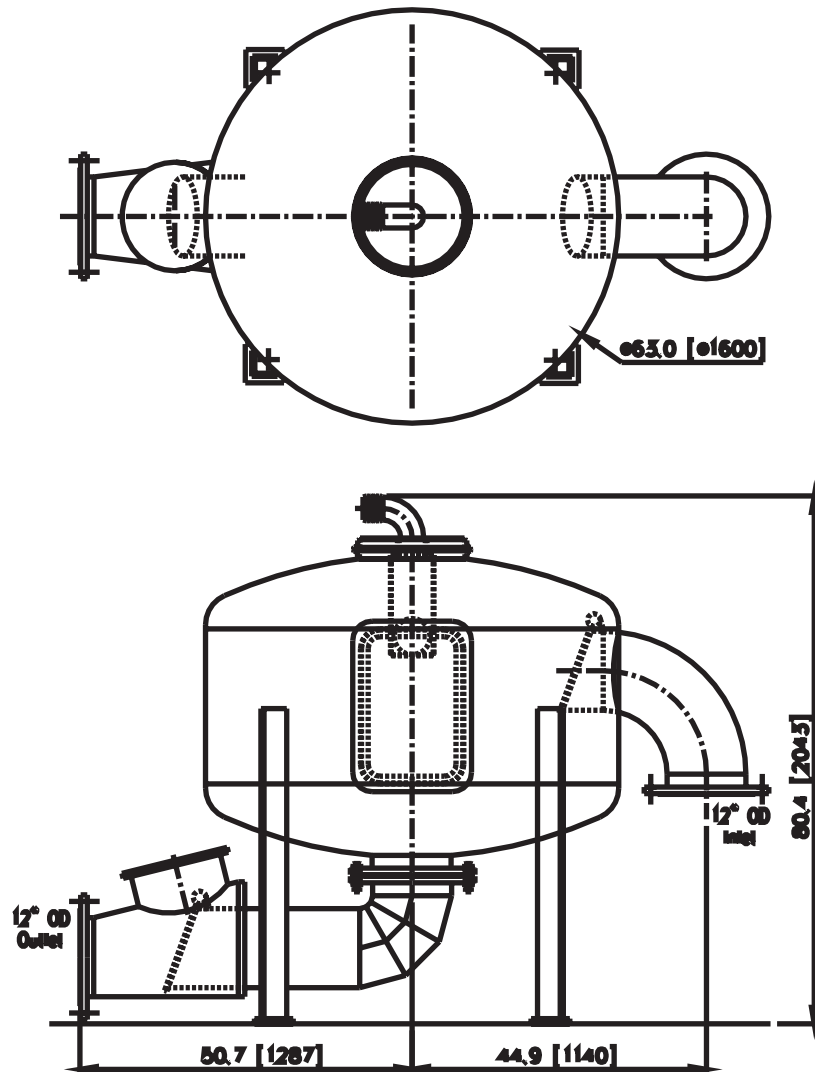

System capacity is 80m³, 100m³, 150m³ & 200m³ / hr.

We build our system around a liquid ring pump running at 1800rpm. This reduces the size of the electric motor by 20% compared to competing systems.

Meydam vacuum system is built for maximum security. All the modes can be controlled by the radio control as well as by the starter panel.

All parts in the vacuum pump is made of water resistant materials.

The system can be delivered with electric or hydraulic motor. We have chosen to use a standing tank as this gives the most efficient system.
